NOTES

- ³ These valves are full port and do not have the Optimizer insert.
- ⁴ Close-Off Pressures measured with 35 in-lb. actuator. The "Close Off Pressure" is the maximum allowable pressure drop across the valve body when the valve is fully closed. (Do not use actuators with torques higher than 90 in-lbs)
- ⁵ The Cv is the gallons of water per minute (gpm) at 60°F that the valve will pass at 1 PSI pressure drop. Hence the 1.0 PSI pressure differential column in the table above is equivalent to the Cv value.

PIPING CONFIGURATIONS

Our 3-Way ball allows the same 3-Way valve to be installed in either a mixing or diverting configuration without sacrificing any performance or Cv. (Valve shown is 1/2"-2-1/2". 3" valve has bypass port in Z plane.)

Mixing — fluid enters through two inlets (A, B) and exits through one outlet (AB)

Diverting — fluid enters through one inlet (AB) and exits through two outlets (A, B)
